

Contract won with group key account DSME to carry out HSE studies for 3 drill ships

The Energy Korea team have been awarded the contract for HSE studies for the three drill ship projects from Daewoo Shipbuilding & Marine Engineering Co., Ltd (DSME). All projects are based on the DSME-12000 design that can support deep ocean drilling of depths ranging from 12,000 feet depth to 40,000 feet drilling depth. This is the third offshore HSE study project awarded by DSME reflecting the client's appreciation of the Energy Korea team's dedication for development of its standard drillship design and engineering design of a fixed platform and also their appreciation for support to them on a wide variety of HSE engineering issues by the Risk group in Korea including HSE and RCM (Reliability Centered Maintenance) Studies.
